May 10, 2018

I had the great pleasure of working with Cristian Mitroi from August 2014 to April 2018 in Deltek's Engineering department. Cristian worked as student developer in our office in Copenhagen.

Cristian worked on both DevOps tasks for our team as well as on core production code. In the DevOps area, he designed and implemented an advanced build setup that could build, bundle and deploy different versions of our software on a variety of backends. In the production code area, he worked on both backend web services in Java as well as frontend code in TypeScript, HTML5 and CSS3.

Cristian has an excellent command of multiple programming languages. In a short time and with minimal training, he became a contributor on par with core, fulltime team members and was able to implement complex features and solve difficult bugs for us.

Cristian has deep technical insight combined with a systematic and rigorous development approach. When presented with a problem, he can quickly track down the root cause and analyze the pros and cons of alternative solutions. This is an essential and extremely valuable trait for a developer when you work with a huge code base like ours.

On the personal level, Cristian is a loyal, friendly, and positive person. He is a team player and is liked and respected by other team members. He reacts constructively to difficult problems even under very stressful circumstances, e.g., tight deadlines etc. He has a superb command of both written and oral English.

Overall, I have thoroughly enjoyed working with Cristian. I am firm in my recommendation of Cristian as a developer, colleague, and person.

Feel free to contact me for additional information,

Anders Hessellund
Lead Architect, Deltek
